

Customer FAQ

ForgeCore Industries — Customer Success

Frequently Asked Questions

Common questions from our customers. If you don't see your question here, contact our support team at support@forgecore.example.com.

Q: What is the typical lead time for standard crucibles?

A: Standard sizes of FC-45, FC-50, FC-72, and FC-90 ship within 5 business days from order confirmation. Custom dimensions require 4-6 weeks. International orders add 2-3 weeks for shipping.

Q: Do you offer trial samples?

A: Yes. We provide free sample crucibles (one per product family) for evaluation. Customers pay only shipping. Contact your regional sales representative to arrange a sample shipment.

Q: What is the warranty period?

A: All ForgeCore crucibles carry a 12-month limited warranty against manufacturing defects. The warranty does not cover damage from improper use, exceeding rated temperatures, or thermal shock from incorrect conditioning.

Q: Can you test a competitor's failed crucible?

A: Yes. Our applications lab provides complimentary failure analysis on any crucible, including competitor products. Submit a failed piece through your sales rep; we deliver a written report within 10 business days.

Q: Do you provide installation and training?

A: On-site installation supervision and operator training are available for large orders (typically >500 units). Charges apply for travel and accommodation. Remote training via video conference is available at no charge.

Q: What are your minimum order quantities?

A: Standard products have no MOQ. Custom sizes: 25 units for FC-45 and FC-50; 50 units for FC-72; 10 units for FC-90. Trial orders below MOQ may be possible with a setup fee.

Q: How do I dispose of a failed crucible?

A: Failed silicon carbide, clay-graphite, and zircon crucibles are non-hazardous industrial waste. Recycle through a refractory waste handler. Graphite crucibles (FC-50) may contain residual metals and should be

tested for TCLP leaching before disposal. See Waste Disposal SOP ENV-002.

Q: Are your products certified for international markets?

A: Yes. FC-series products carry CE marking (EU), UKCA marking (UK), and comply with REACH, RoHS, and OSHA standards. Country-specific certifications available on request (e.g., CCC for China, INMETRO for Brazil).

Q: Can I get a custom formulation?

A: Yes. Our R&D team develops custom compositions for specialised applications. Typical development cycle is 8-12 weeks from specification to sample delivery. Custom development requires a development agreement and NRE charge.

Q: What if a crucible fails prematurely?

A: Document the failure with photos and lot number, then contact customer support within 30 days. We investigate every premature failure claim and provide credit or replacement if the failure is determined to be manufacturing-related.

Q: Do you publish MSDS for your products?

A: Yes. Material Safety Data Sheets are available for download at msds.forgecore.example.com. MSDS cover composition, handling, storage, and emergency procedures.

Q: What packaging do you use for international shipments?

A: International orders ship in ISPM-15 compliant wooden crates with foam cushioning and silica gel desiccant. All paperwork (commercial invoice, packing list, certificate of origin) is included inside a waterproof pouch attached to the crate exterior.
